## Work Experience

### Bank of Ningbo (Financial Technology Department)

Jiangbei, Ningbo, China

Data Analyst

May, 2024 - Present

- Development: Responsible for daily data development for the enterprise analysis system, big data platform.
- Modeling: Completed modeling for projects including customer loan interest rate pricing and optimal investment strategies.
- Operation & Maintenance: Managed data deployment for the analysis system and big data platform, overseeing batch processing operations and enhancing processing timeliness.

## Education

### National University of Singapore(NUS)

21 Lower Kent Ridge Rd, Singapore

M.S. in Statistics

Aug. 2022 - Jan. 2024

### Shanghai Jiao Tong University(SJTU)

800 Dongchuan Rd, Minhang District, Shanghai, China

B.S. in Mathematics and Applied Mathematics (Wu Wenjun Honour Program)

Sep. 2018 - Jun. 2022

- Excellent graduates of Shanghai Jiao Tong University

## Skills

<b>Programming</b>	Python, C++, Mysql, VB, VBA, R, Mathematica, Matlab, etc.
<b>Working Software</b>	Latex, Markdown, Git, Excel, PowerPoint, Word, etc.
<b>Web Design</b>	React, TypeScript, JavaScript, HTML, CSS.
<b>Languages</b>	Chinese, English.

## Research

### Khovanov homology and knot concordance

Shanghai Jiao Tong University

Bachelor's dissertation

Dec. 2021 - Jun. 2022

- This paper mainly studies the relations between Khovanov homology and knot concordance. Based on a variant of the Khovanov homology developed by Lee, we can construct the Rasmussen invariant. It provides a lower bound for the slice genus of a knot. For alternating knots, it equals the signature. As an application, we introduce Piccirillo's elegant proof, which shows that the Conway knot is not slice.

### A Generalized Determinant of Matrices and Applications

Shanghai Jiao Tong University

Research team leader

Jun. 2019 - Dec. 2020

- We gave a generalized definition of the determinant of matrices, which is compatible with the usual determinant for square matrices and keeps many important properties, such as being an alternating multilinear function, keeping multiplication formula and partly keeping the Cauchy-Binet's formula. As applications of the new theory, the generalized Cramer's rule and the generalized oriented volume are obtained.
- This program was rated as outstanding program and supported by NSFC and NSF of Shanghai Municipal. Our team has already written a paper 'A Generalized Determinant of Matrices and Applications' and has submitted it to 'Algebra Colloquium'.

## Project

### BldDb

Jun. 2022 - Present

- BldDb is a 3x3x3 Rubik's cube blindfolded algorithms database. This website includes thousands of algorithms including 3-style corner (all buffers), 3-style edge (all buffers), corner twist, edge flip, etc. It supports simplified Chinese, English and Japanese, and is compatible with mobile phones, PCs and tablets. The website provides many options for each case, so the users can select algorithm based on their own preference.

### Commutator

Mar. 2022 - Present

- Let  $G$  be any group. If  $a, b \in G$ , then the commutator of  $a$  and  $b$  is the element  $[a, b] = aba^{-1}b^{-1}$ . This project is aimed at decomposing algorithms in commutator notation. For example, it decomposes  $ab^4cba^{-1}b^{-2}c^{-1}b^{-3}$  to  $[ab, b^3cb^2]$ .

### Customized Poker

Feb. 2021 - May. 2022

- You can design your own photo playing cards using 'Customized Poker' for print. For example, it can be used for commemorating teachers or students by making customized poker cards.

## Future Direction

I want to engage in statistical analysis, modeling, and prediction, to learn and to discover with curiosity.
